Subject: A17508-26 - PRR 7/30/2026 - Records Attached/No responsive records to some requests
Attachments: 24 files (23 LEPC agendas and minutes, Shelby County Hazard Mitigation Plan 2021 Final.pdf)

Hello:

Please see the below responses to your request regarding the Shelby County Hazard Mitigation Plan: Records of the Shelby County Office of Emergency Management and Homeland Security:

(1) the current FEMA-approved Shelby County Multi-Jurisdictional Hazard Mitigation Plan, including all annexes and appendices, and the date of FEMA approval; Attached are records responsive to your request #1. There are no fees for these records. However, fees may apply to future requests.

(2) any draft, update, or revision of that plan in progress, including the current planning cycle schedule; There are no responsive records at this time for Request #2. You may want to resubmit this #2 request after January of 2027.

(3) any portion of the plan or its supporting risk assessment that addresses battery energy storage systems, lithium-based energy storage, data centers, or large on-site electric generation; There are no responsive records regarding Request #3.

(4) any hazard identification, risk assessment, vulnerability analysis, or critical facility inventory that lists or evaluates the battery energy storage installation at 3231 Paul R. Lowry Road, the Tulane Road campus, or the Colossus Water Recycling Plant site at parcel 050101 00054; There are no responsive records regarding Request #4.

(5) all Local Emergency Planning Committee agendas, minutes, or meeting records from January 1, 2024 to present that reference battery energy storage, data centers, or any of those facilities; Attached are records responsive to your request #1. There are no fees for these records. However, fees may apply to future requests.

(6) any Tier II hazardous chemical inventory reports submitted for those facilities and held by the County; There are no responsive records regarding Request #6.

(7) all correspondence between the County and CTC Property LLC, MZX Tech LLC, X.AI Corp., SpaceXAI, or their agents concerning emergency planning, hazard mitigation, or facility risk. There are no known responsive records regarding Request #7. Even if responsive records did exist, please be advised that your request #7 is not specific enough to allow Shelby County Government to identify the records sought for productions. Pursuant to the Tennessee Public Records Act ("TPRA"), Tenn. Code Ann. § 10-7-503(a)(4), records request must be sufficiently detailed to enable the government entity to identify the specific records sought for production; in particular the statute states "This section does not require a governmental entity to sort through files to compile information into a new record or to create or recreate a record that does not exist. A request for inspection or copying of a public record must be sufficiently detailed to enable the governmental entity to identify responsive records for inspection and copying." In this instance, your request does not request a specific record (what type of correspondence and who were the parties to the correspondence) or a specific date or time period to enable Shelby County to identify the record sought. Therefore, Shelby County Government is unable to process your request.

If the Hazard Mitigation Plan does not identify or evaluate battery energy storage at these sites, please state that in writing. There are no responsive records regarding this unnumbered portion of your

Request.

Sincerely,

Shelby County Public Records
